

W-Pos167 TRANSIENT ELECTRIC BIREFRINGENCE OF RABBIT STRIATED MUSCLE MYOSIN OBTAINED FROM DIFFERENT SOURCES, Sonja Krause and Kusuma Thallam, Dept. of Chemistry, Rensselaer Polytechnic Institute, Troy, NY 12180.

The birefringence relaxation time, and therefore the conformation in solution, of rabbit striated muscle myosin obtained from J. F. Koretz, Biology Dept., Rensselaer Polytechnic Inst. (sample A) and from the laboratory of W. F. Harrington, Dept. of Biology, The Johns Hopkins Univ. (sample B) are strikingly different. Both differ from values obtained by Bernengo and Cardinaud, *J. Mol. Biol.* (1982) 159, 501 (sample C), in high ionic strength phosphate buffer at pH 7, which were consistent with a myosin conformation that included a 90 degree bend between the light and heavy meromyosin portions of the molecule. Data on sample B, obtained in 10 mM pyrophosphate buffer at pH 8 to 9 both by Hvidt et al, *Biopolymers* (1984) 23, 1283, and in the present work, are consistent with the extended conformation of myosin. Data on sample A, obtained in this work, both in 2 mM and 10 mM pyrophosphate buffer at pH 9 and in high ionic strength phosphate buffer at pH 7, are internally consistent but do not agree with data on samples B or C. Because of the overlap of buffer systems and pH used for the different samples, the differences in data cannot be ascribed to the different buffer systems but are probably due to different impurities present in the different samples. The birefringence relaxation time of sample B decreases ~ 32% as the temperature increases from 25°C to 40°C in 10 mM pyrophosphate buffer at pH 9, indicating a somewhat increased flexibility of myosin with increasing temperature.

Supported by the National Science Foundation, Grant No. CHE 83-08089

W-Pos168 INFLUENCE OF THE SIDE CHAIN PHOSPHATE ON THE BINDING OF REDUCED FLAVIN TO AZOTOBACTER APOFLAVODOXIN. D.E. Edmondson and G. Williamson (Intr. by D.B. McCormick) Dept. Biochem., Emory Univ., Atlanta, GA 30322

The effect of the side-chain phosphate on the affinity of *Azotobacter* apoflavodoxin for the various redox levels of flavin has been determined by redox potential measurements on reconstituted apoprotein complexes with FMN and with riboflavin (RFL). Both native and reconstituted FMN-apoprotein complexes have, at pH 8.0, one-electron couples of -203 mV (PF/PFH•) and -500 mV (PFH•/PFH⁻). The same couples for the RFL-apoprotein complex were determined to be -277 and -251 mV, respectively. Approximately 23% of neutral RFL semiquinone is thermodynamically stabilized on 1-electron reduction of the RFL-apoprotein complex. The binding of the hydroquinone forms of riboflavin and of FMN to apoflavodoxin were also measured directly from the quenching of the tryptophanyl fluorescence of the apoprotein. The respective K_a values determined by this approach were in reasonable agreement with those calculated from the redox potential data. These show that the apoflavodoxin exhibits stronger affinities for the oxidized and neutral semiquinone forms of FMN than for riboflavin by factors of 10^3 and $>10^4$, respectively; however, the affinity for the hydroquinone form of FMN was only 3-10 times than for reduced riboflavin. These data suggest that electrostatic repulsion between the anionic side-chain phosphate and the anionic N(1) position of the flavin hydroquinone does not contribute to the reduced binding affinity of the apoflavodoxin for the reduced FMN relative to the oxidized form. (Supported by NIH Grant GM-29433).

W-Pos169 MOLECULAR AND STOCHASTIC DYNAMICS OF PROTEINS Walter Nadler and Klaus Schulten, Dept. of Physics, Technical University of Munich, 8046 Garching, Fed. Rep. Germany

The microscopic short-time dynamics of proteins resulting from molecular dynamics simulations (collaboration with Karplus et. al.) can be reproduced on a longer time scale by stochastic Langevin equations involving selected degrees of freedom. For this purpose one has to determine the local viscosity of the atomic motions by means of the corresponding velocity autocorrelation functions. The viscosity can be extrapolated to describe the 3-dimensional motion of subunits which contain many atoms. The extrapolated viscosity yields a satisfactory description of the Moessbauer spectra of Myoglobin by Parak et. al. which account for the 1-100 ns dynamics of the heme group. However, on this time scale the heme group appears to be often trapped in conformational substates a feature which increases the effective viscosity of the group by a factor 100. Our comparison of the stochastic motion of single atoms in proteins was based on a solution (in terms of the velocity correlation function) of the Langevin equation for a harmonic potential. The analysis of the Moessbauer data involved the solution of the Langevin equation for a general 3-dimensional corrugated (many substates) potential surface in the limit of strong friction in terms of the Pade approximation of the Moessbauer line shape function reproducing correctly its low and the high frequency dependence.

INSTRUCTIONS FOR AUTHORS

The *Biophysical Journal* publishes original articles and occasional invited reviews on pure and applied biophysics. Contributions should be sent to the Editor, Eugene Ackerman, *Biophysical Journal*, Box 511, Mayo Memorial Building, University of Minnesota, 420 Delaware St. S.E., Minneapolis, MN 55455, telephone (612) 373-5616. An acknowledgment card is sent out by the Editor upon receipt of a manuscript. Please let the Editor know if your manuscript is not acknowledged. Papers will be printed as soon as practical after acceptance, but not necessarily in the order in which they are received for publication.

Referees: The Editor normally submits each manuscript to at least two referees. Contributors are encouraged to suggest at least four names to be added to the list from which referees will be selected.

Letters to the Editor: Brief letters to the Editor that make specific scientific reference to papers published previously in the *Biophysical Journal* are welcome. Letters will be reviewed before publication.

Brief Communications are brief reports of novel experimental or theoretical findings which are limited to four printed pages each, including figures, tables, and bibliography. These will be reviewed according to standard procedures but with high priority to insure rapid publication.

Announcements of direct interest to the Biophysical Society are acceptable and will be printed if the sponsoring agency meets the publication cost. Camera-ready announcements may be printed without cost if the sponsor is willing to wait until extra space is available.

PREPARATION OF MANUSCRIPT

Manuscripts are to be typed double spaced, including references. Because space in the Journal is limited, authors should avoid inessential mathematical expressions and should plan illustrations and their lettering for maximum reduction. Four copies of papers are to be submitted. Upon acceptance of a manuscript, the Editor will request original drawings or clear photographs of figures and an original typescript.

SUBGROUP MEETING PROGRAM

SUNDAY AFTERNOON, FEBRUARY 9, 1986

BIOENERGETICS SUBGROUP 1:00 - 5:30 p.m.

Robert Simoni, Stanford University

Organizer

MOLECULAR APPROACHES TO BIOENERGETICS

Robert Simoni, Stanford University

Introductory Remarks and Overview

Michael Douglas, University of Texas

TARGETING AND PROCESSING SIGNALS FOR ASSEMBLY OF THE MITOCHONDRIAL F_1 ATPase β SUBUNIT

Robert O. Poyton, University of Colorado

NUCLEAR CODED GENES FOR CYTOCHROME-C OXIDASE

David H. MacLennan, University of Toronto

MOLECULAR GENETICS OF THE Ca^{++} ATPase OF SARCOPLASMIC RETICULUM

Masamitsu Futai, Osaka University

GENETIC STUDIES OF THE FUNCTIONAL RESIDUES OF PROTON ATPase

Karlheinz Altendorf, Universitat Osnabruck

BIOCHEMICAL RESOLUTION OF THE F_0 PORTION OF THE *E. COLI* F_1F_0 COMPLEX

Robert D. Simoni, Stanford University

STRUCTURE, FUNCTION AND BIOGENESIS OF THE H^+ -ATPase Complex of *E. COLI*

MEMBRANE BIOPHYSICS SUBGROUP 1:00 - 5:30 p.m.

Peter K. Lauf, Wright State University School of Medicine

Organizer

CHEMICAL MODIFICATION AND PROBES OF MAJOR ION TRANSPORT PATHWAYS

Peter K. Lauf, Wright State University

Introduction and Announcement of the 1986 Cole Award

C. L. Borders, Jr., College of Wooster

CHEMICAL GROUP REACTIVITY AND TRANSPORT PROTEIN MODIFICATION

M. Jennings, University of Iowa

CHEMICAL MODIFICATION OF ESSENTIAL AMINO ACID RESIDUES IN RED BLOOD CELL BAND 3 PROTEIN

B. Deuticke, Aachen, Federal Republic of Germany

SULPHYDRYLE AND PASSIVE ION PERMEABILITY

L. Cantley, Harvard University

REGULATION OF Na^+/K^+ ATPase

I. Levitan, Brandeis University

REGULATION OF NEURONAL ION CHANNELS BY PROTEIN PHOSPHORYLATION

D. C. Eaton, University of Texas

MODIFICATION OF Na^+ CHANNEL KINETICS BY AMINO-GROUP REAGENTS

E. Wright, University of California

FLUORESCENCE PROBES OF ACTIVE SITES ON THE Na GLUCOSE COTRANSPORTER

CONTRACTILITY SUBGROUP

Organizers: *Lois Greene*, National Institutes of Medicine

David Thomas, University of Minnesota

WEAK-BINDING AND RELATED CROSS-BRIDGE STATES

Speakers: *H. Huxley*

M. Schoenberg

E. Eisenberg

E. Pate

P. Fajer

R. Craig

M. Reedy

Evening Session Lecture: *Edward Korn*

STRUCTURE-FUNCTION STUDIES ON THE *ACANTHAMOEBA* MYOSIN ISOENZYMES: MINI-MYOSINS MAKE MINI-MUSCLES

MOLECULAR BIOPHYSICS SUBGROUP 1:00 - 5:30 p.m.
Robert M. Stroud, University of California, San Francisco
Organizer

MACROMOLECULAR INTERACTIONS

Robert M. Stroud
Introductory Remarks

Richard E. Dickerson
RATIONAL PRINCIPLES IN THE DESIGN OF DNA GROOVE BINDING DRUGS

Jim Wells
ENZYME SUBSTRATE INTERACTIONS PROBED BY SITE DIRECTED MUTAGENESIS

Jim Hogle
THE 3-D STRUCTURE OF POLIO VIRUS: IMPLICATIONS FOR ASSEMBLY AND IMMUNE RECOGNITION

GENERAL INTEREST

SUNDAY, February 9, 1986, 1:00 - 5:00 p.m.
Future of Analytical Ultracentrifugation
Room 316

SUNDAY, February 9, 1986, 2:00 - 6:00 p.m., Room 203/205
Opening of the Irving Geis Art Exhibit
"Thirty Years of Visualizing Macromolecular Structure"
Reception 4:00 - 6:00 p.m.

SUNDAY EVENING, February 9, 7:00-11:00 p.m., Room 408
"Shirt-sleeves Biophysics". Informal mixer and discussion for
students, new members, and guests.

MUSIC BOX LUNCHESES 12:00 - 1:30 p.m.
Box lunches will be available on Monday, February 10 and Wednesday, February 12 in the Main Arena.
Live music will be presented on Monday and Wednesday during lunch.

SPECIAL FILM
"Fatty Acid Monolayer on Water Surface"
Monday, February 10, 1986 12:00 - 12:15 p.m. Room 316

EXHIBITORS' MIXER, Brooks Hall
Monday, February 10, 5:00-7:00 p.m.

RED CELL CLUB MEETING, Room 408
Monday, February 10, 7:00 p.m.

BIOLOGY OF SURVIVAL SUBGROUP MEETING
Monday, February 10, 8:00 p.m. Larkin Hall I
"Pesticides and Health: California Farmworkers Today"
Speaker: Nayvin Gordon, M.D., San Diego, California

ANNUAL BUSINESS & COUNCIL MEETING, Main Arena
Tuesday, February 11, 7:30 - 9:00 a.m.
Continental Breakfast Available

30th ANNIVERSARY LUNCHEON
Tuesday, February 11, 12:00 - 1:30 p.m. Main Arena

SOCIETY MIXER/DINNER
Tuesday, February 11, 5:30 - 7:30 p.m. Main Arena
Presentation of the Margaret Oakley Dayhoff Award 8:00 p.m.

SHINYA INOUE, NATIONAL LECTURER 8:15 p.m. Main Arena
"Leeuwenhoek, Huygens, and the Future of Biophysics"

Women's Caucus Luncheon — Organized by Jane Koretz
Wednesday, February 12, 12:00-1:30 p.m. Room 301
Box lunches available
Luncheon coincides with "Workshop on Availability of Research Funding: Specifics on Opportunities for Women"
Speaker: Gretchen Kline
Organizers and Co-chairs: Maria Correa-Friere and Martha Farmer

SEMINAR: Biostructures, Room 302
1986 Semi Annual PRT Luncheon
Wednesday, February 12, 12:00 - 1:30 p.m.

PROGRAM COMMITTEE

Neville R. Kallenbach, Chairman

(continued from inside front cover)

Style: Papers are to follow the recommendations of the Council of Biology Editors, Committee on Form and Style, Style Manual for Biological Journals (4th edition, 1978, American Institute of Biological Sciences, 1401 Wilson Blvd., Arlington, VA 22209).

Title: The title of each manuscript should identify the content of the article; clarity and conciseness are essential for indexing, abstracting, and retrieval. Not more than 100 characters and spaces should be used.

Abstracts: Each manuscript is to be accompanied by an informative abstract of no more than 200 words, to be placed at the head of the paper. In order that the abstract be intelligible to a wide range of readers, it should be objective and describe the work done in as general a language as practicable. After page proof, the abstract may be used by abstract journals.

Materials and Methods: Capitalize trade names and give manufacturers' full names and addresses.

Formulae: Formulae are to be typewritten or carefully hand-lettered. Clearly indicate capital and lower case letters. Label Greek and unusual symbols the first time they appear. Use fractional exponents instead of root signs. The solidus (/) for fractions will save vertical space.

References: All references should be typed double spaced and contain the titles of articles. It is understood that references to unpublished work by others or acknowledgments have been approved by the person whose work is quoted and the Editor should be so advised in the covering letter.

Illustrations: (a) Charts. Do not send oversize charts or drawings when submitting a manuscript for review. In planning each chart, the author should allow for the printed reduction in size of the illustration and lettering. Charts with simple curves will be reduced to approximately 2½ inch width, permitting makeup side by side on the page. Plan the lettering on charts so that after reduction, the capitals and numbers will be 1¾ to 2 mm high.

(b) Photomicrographs. Photographs are best reproduced same size with lettering about 3 mm high. Lettering is to be simple in style with uniform line width and no serifs; if it is impractical to submit photographs with good lettering, enclose a duplicate set of unlettered photos with a tissue overlay or model to guide the *Journal's* illustration service.

Tables: All tables should be typed double spaced and carry a title. Avoid excessive use of horizontal and vertical lines. A standard structure would be a single box heading with all pertinent information located below in distinct columns. Footnotes to tables should be placed at the bottom in the following sequence: *, ‡, §, ||, ¶.

CHARGES TO AUTHOR

Page charges are \$30 per page. These charges will be waived by the Editor upon request. Payment of page charges is not a criterion for judging the acceptability of a manuscript, nor is nonpayment cause for delay in publication.

Compscripts: The Biophysical Journal can use nine-track magnetic tapes, selected floppy disks, and telephone transmissions of accepted manuscripts. These are translated, edited, and coded to be fed directly to a typesetting computer. Because of the savings realized by these procedures, the Journal will allow a \$5.00 reduction in page charges (from the normal \$30.00 to \$25.00 per printed page) for material set from magnetic tapes and floppy disks, and a \$10.00 reduction in page charges (from \$30.00 to \$20.00) for material telecommunicated to The Rockefeller University mainframe computer. (For information on the compatibility of accepted manuscripts prepared on floppy disks, please contact The Rockefeller University Press Journals office directly.)

Reprints are available at a cost indicated on the reprint order form that accompanies galley proof.

Relettering: Extensive relettering and/or redrawing of charts and photographs will be charged at cost.

Halftone engravings exceeding four full pages will be charged at \$100 per full page.

Subscriptions to the *Biophysical Journal*

The price for a subscription per year (two volumes of six issues each) is \$250, postal surcharge Europe only, \$19 net, and for a single number is \$18.50, payable in advance. There is no charge for domestic or foreign postage. Members may subscribe at a discount through the Secretary of the Biophysical Society (Emily M. Gray, Executive Assistant, Biophysical Society Office, 9650 Rockville Pike, Room L-110, Bethesda, MD 20814). Subscriptions received after a year has begun will start with the first number of that year or the first number of the succeeding year, at the direction of the subscriber. Claims for nonreceipt of issues will be honored when received within 3 months of mailing for U.S.A. subscribers, 6 months for foreign subscribers.

Remittances should be made by draft or check drawn on U.S. banks, or by postal money order, payable to the *Biophysical Journal*, The Rockefeller University Press, Post Office Box 5108, Church Street Station, New York 10249. Inquiries about subscriptions should be addressed to the Order Service of The Rockefeller University Press, 1230 York Avenue, New York 10021. Inquiries about backfiles of the journal in microfilm or microfiche should be addressed to University Microfilms, 300 North Zeeb Road, Ann Arbor, MI 48106.

BACK VOLUMES 1-13 (1960-1973) are handled by AMS PRESS Inc., 56 East 13th Street, New York 10003; write directly to AMS for information about these back issues.
